Moisturising system
for ceramics

Imagine your ceramic had exactly the same consistency for days on end – as if you had only just mixed it. Not only that: you could easily pick the ceramic up from a glass plate while layering.

∴ FUNCTIONAL BEAUTY ∴ NO MATERIAL LOSS AND NO T

With Aqualine professional, your materials will always have the right viscosity. Drying out is prevented by the cellulose strips continuously absorbing liquid from the reservoir. This gives you a layering workplace which fully meets the highest demands in dentistry.

The advantages are obvious: efficient working processes without any time pressure. No materials lost because of drying out. This saves costs and guarantees high process reliability.

TIME PRESSURE :: PERFECT CERAMIC CONSISTENCY :: SIMPLE AND EFFICIENT WORKING ::

Drying out is prevented

Cellulose strips transport the necessary liquid to the ceramics – for weeks on end. Open the clamping frame, place your cellulose strips in the desired position and fill up with Aqualine Two in One Build up Liquid.

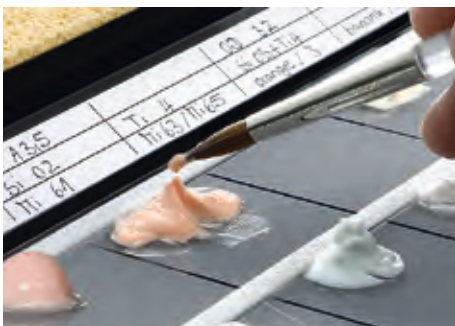

Large work surface

Measuring 14 x 26 cm, the Aqualine professional glass plate provides plenty of space for clear and structured working. This is greatly helped by the grid pattern under the glass plate with the corresponding area for attaching labels.

So simple

Deposit your ceramic powder on the glass plate, then simply slide the small pile of powder towards the cellulose strip. The powder is automatically moistened with liquid until the ideal level of saturation is reached.

Perfect consistency

The perfect consistency of materials is achieved in no time and continuously maintained by Aqualine Two in One Build up Liquid. You can start layering straight away. Pick-up from the glass plate is simple. This guarantees fast and economical working to the highest quality standard.

Everything in its place

As well as the rinsing cup with the sponge in front, there is integrated storage for 8 instruments. Under the fold-out hand rest there is also space for an optional stain tray set, comprising 3 easy-to-clean elements. These are made of porcelain and contain 28 sections and a mixing platform.

Innovative system

Slide the base plate into the „garage“ during breaks in layering. Your ceramics are kept perfectly tidy and fully protected against dust and any other contamination. Integration of all processes and functions into a single system makes Aqualine professional a cost-effective master tool for ceramists.

∴ THE SYSTEM FOR CERAMISTS ∴

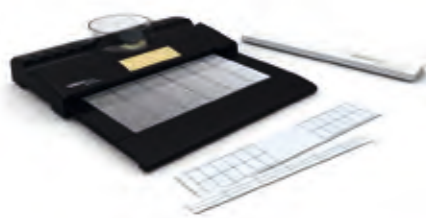

AQUALINE professional

Colour anthracite rubber touch
Dimensions 24,5 x 24 | 42 x 8 cm

Components housing, rinsing cup, tray with glass plate, sponge, self-adhesive cellulose strips

Order No. AP-001

AQUALINE professional

Colour black high glossy
Dimensions 24,5 x 24 | 42 x 8 cm

Components housing, rinsing cup, tray with glass plate, sponge, self-adhesive cellulose strips

Order No. AP-003

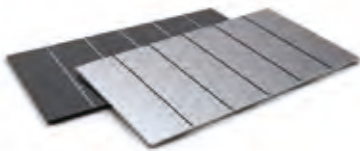

AQUALINE professional

Colour white high glossy
Dimensions 24,5 x 24 | 42 x 8 cm

Components housing, rinsing cup, tray with glass plate, sponge, self-adhesive cellulose strips

Order No. AP-002

AQUALINE professional glass plate

Version grey, black
Number 1 piece
Design glass plate, printed

Order No. AP-010 grey, AP-011 black

AQUALINE professional stain tray set

Version white, porcelain
Number 3 pieces
Design 2 stain trays, 1 mixing tray

Order No. AP-014

AQUALINE Two in One Build up Liquid

Inhalt 500 ml
Number 1 piece
Design dash bottle

Order No. AC-002

AQUALINE professional

	Number	Order No.
