Moisturising system
for ceramics

Small but perfectly formed – and with everything you need. Aqualine smart fits in, even when there's little space available. With its sophisticated design and proven functions, it is more than a match for its big brother from the professional range.

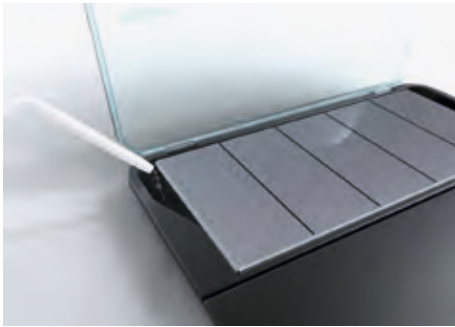

∴ FUNCTIONAL BEAUTY ∴ EFFICIENT WORKING

In a compact design, the Aqualine smart offers everything a perfect ceramics workplace needs: the moisture of the materials is constantly kept at the perfect level via cellulose strips, without producing any unpleasant odours. There is no chance of materials drying out. It saves on costs and materials. The overall ergonomic design allows efficient working processes in the smallest of spaces – simply smart, isn't it?

WORKS IN A SMALL SPACE :::: SAVES TIME AND MATERIALS :::: PERFECT CERAMIC CONSISTENCY ::::

No drying out

Open the cover and get started: pour in the Aqualine Two in One Build up Liquid and place the cellulose strips in the desired position. These transport the necessary liquid to the ceramics – for days on end. This prevents any drying out.

Space saver

Small but perfectly formed: measuring just 22 x 10, there is a large enough area available for clear and structured working. As in the professional range, this is helped by the grid pattern under the glass plate. As an option, a pool with a small sponge is available for washing out brushes.

Simply smart

It saves time: deposit your chosen ceramic powders on the glass plate and simply slide the small piles of ceramic towards the cellulose strip. They will automatically soak up the liquid until the ideal level of saturation is reached.

Creamy materials

How to enjoy layering: the perfect consistency of materials is achieved in no time and continuously maintained by Aqualine Two in One Build up Liquid. This allows for quick and easy working to the highest quality standard.

Intelligent system

Added functions can easily be integrated: below the hand rest there is space for a two-part stain tray set made of porcelain with 16 sections and one mixing platform. Write-on labels can also be attached to the inside of the cover flaps.

Compact and tidy

Taking a break is no problem: simply close the lid when leaving the workplace. Your ceramics are kept perfectly tidy and fully protected against dust and any other contamination. They will also retain their consistency, so that you can start working again immediately after a break from layering.

∴ THE SMART SYSTEM ∴

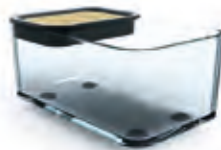

AQUALINE smart

Colour anthracite rubber touch
Dimension 260 x 170 x 32 mm

Components tray with glass plate and hinged cover, self-adhesive write-on labels, cellulose strips

Order No. AS-001
